

VICTOR INSULATORS

FRED M. LOCKE.

CATALOGUE No. 6
FRED M. LOCKE,
VICTOR, N. Y., U. S. A.

THE line of insulators which we represent in this catalogue is the result of many years' experience in the manufacture of this class of work. It has been our constant study, not only to improve wherever possible, but also to attain the highest degree of mechanical and electrical perfection in the construction of our insulators.

WE RESPECTFULLY SOLICIT A TRIAL TO
MAKE ANY SPECIAL DESIGN OF WORK YOU
MAY WANT.

Locke

G R E E T I N G

The marvelous success of high voltage power transmission is due to the superiority of *Locke Insulators*, their perfection of manufacture, uniformity of quality, perfect design, mechanical and electrical strength to overcome arcing and leaking of the current in wet and dry weather, to prevent the static electricity from burning off the pins, and to prevent puncture of the insulator by the high voltage current, *and to neutralize the magnetic influence on the insulator.* We thank you for the liberal patronage of the past, and promise you our best effort to merit the continuance of the same.

Western Union and A B C Code, 4th Edition.

The working voltage on **Locke** Insulators is guaranteed to be equal, or better, than any insulator of the same size made, but recommend the use of a larger size, to have a greater factor of safety; for this reason I suggest that you write me where the insulators are to be used, stating the voltage, and I will suggest proper insulators, based on my long experience.

SECTIONAL VIEW OF CHINA INSULATOR

*Illustrating a Typical
Shell Construction*

This construction makes possible the use of thin pieces of porcelain thickness, which allow for most thorough distribution. Thick and heavy pieces of china are liable to imperfection.

Every shell is a perfect insulator in itself, and one imperfect shell does not impair the insulation of the whole, since the insulators are built so that they will carry, with safety, the potential stress, with one imperfect shell.

Each shell is glazed separately, then fired together, making insulators as well as electrically a strong insulator.

STEEL PIN, WITH PORCELAIN BASE

Designed for high voltage work. They include all the strong features of the all-wood top pin, in addition to the porcelain base.

**The Porcelain Base Increases the
Arcing Distance 5,000 to 10,000 Volts**

The inner petticoat of all Locke Insulators extends below the top of this base thus producing the most perfect possible combination for high voltage currents.

The base is a highly vitrified and homogenous body, whose life and wear are unlimited. It prevents the destructive arcing around the insulator, burning off of pins, cross-arms, and, in many cases, poles and other property.

The wood top is properly boiled in paraffine and is entirely contained within the insulator, protecting it from the weather, insects, etc.

Important, when ordering: The steel pins are used as follows: No. 1 pin with No. 15 glass; No. 2 with No. 3, 3½ and 4, porcelain; No. 3 with No. 16, 18, glass, and with any "Victor," with glass centers; No. 4 with No. 2, 6, 11 or 12, porcelain; No. 5 with No. 10, porcelain, or No. 17, glass; No. 6 and 7 with No. 17, glass, or No. 10, porcelain; No. 8, 10, 12 and 13 with any insulator except No. 17, glass and No. 10, porcelain. All pins, except No. 2, 4, 5, 6 and 7, can be used with standard glass insulators.

Standard sizes below. Special sizes to order.

No.	Size Bolt	Dimensions of Wood	Porcelain Base	Weight
1	½ x 9 ½	2 ¾ x 1 ¼	No. 1	18 oz.
2	½ x 9 ½	1 ¾ x 1 ¼	No. 2	1 ¼ lb.
3	½ x 10 ½	2 ¾ x 1 ¼	No. 2	1 ¼ lb.
4	½ x 8 ½	1 ¾ x 1 ¼	No. 1	1 lb.
5	⅝ x 9	2 ¼ x 1 ½	No. 3	1 ½ lb.
16	½ x 11	2 ¼ x 1 ½	No. 4	—
17	⅝ x 11	2 ¼ x 1 ½	No. 4	—

No. 1 is 2 ¼ in. in diameter and 2 ¼ in. high; No. 2 is 2 ¾ in. in diameter and 3 in. high; No. 3 is 2 ½ in. in diameter and 2 ¼ in. high.

STEEL PIN, WITH ALL WOOD TOP

Patented.

These pins consist of a High Carbon steel bolt, a nut, washer, and paraffined wood top. They are strong, durable, and compact, and are amply fortified against lateral strains. Only selected, straight-grained, and good sound timber is used in their construction. They are especially adapted to low voltage work and made in the following sizes:

No.	Size of Bolt	Length of Wood	Diam. of Base of Wood	Weight
6	$\frac{5}{8}$ x 9"	4"	$2\frac{1}{4}$ "	20 OZ.
* 7	$\frac{5}{8}$ x 11	$4\frac{1}{2}$	$2\frac{1}{4}$	21 OZ.
8	$\frac{1}{2}$ x $9\frac{1}{2}$	$4\frac{1}{2}$	$1\frac{7}{8}$	12 OZ.
10	$\frac{7}{16}$ x $9\frac{1}{2}$	$4\frac{1}{2}$	$1\frac{7}{8}$	12 OZ.
12	$\frac{1}{2}$ x $8\frac{1}{2}$	$3\frac{1}{2}$	$1\frac{7}{8}$	10 OZ.
13	$\frac{1}{2}$ x 10	$5\frac{1}{4}$	$2\frac{1}{4}$	14 OZ.

All of these pins have standard size screw, except No. 6 and 7, which are for $1\frac{1}{2}$ inch pin-hole.

* For cross-arm 6 inches deep.

Please Order by Number.

No. 14, STEEL PIN, WITH GALVANIZED BASE

For Iron Arms and Fittings.

Patented.

The base is well galvanized and strongly made. As a result of the perfect satisfaction it has always given, it has come to be a standard among the articles of first-class line construction, and can be used where no other pin is practical. It is not expensive, and, when in place, is neither cumbersome nor inconvenient, as is the case when ordinary blacksmith's fixtures are used. This pin is desirable for all kinds of low voltage line work.

Weight, $\frac{1}{2}$ pound; length of wood is $2\frac{3}{8}$ inches; galvanized base, $2\frac{1}{8}$ inches; and the bolt of the regular size pin is $\frac{7}{16}$ x $5\frac{1}{2}$ inches.

No. 20, TWO-PIN BREAK-ARM

Patented.

HIGH CARBON STEEL PIN

With Wood Top

Locke's Patent.

This pin has a threaded and paraffined hard wood thimble on the top to fit the standard sizes of glass and porcelain insulators and is provided with a shoulder at the top, and a nut and washer at the bottom, of the shank to attach it rigidly to wooden cross arms of the regular thickness.

CROSS-ARMS

Made of the best grade of pine, free from knots and other defects. Painted or unpainted and bored for any size pin. Unless otherwise specified, all cross-arms are bored for two lag-screws for fastening to pole.
